## DOCTORAL THESIS RESEARCH

*“Semi-analytic forecasts for galaxy formation and cosmic reionization in the ultrahigh-redshift universe”*

## SCIENTIFIC INTERESTS

*I am an expert in modelling galaxies and AGN forming in the early universe and their subsequent impact on the reionization of the intergalactic H and He using the semi-analytic methods. During my doctoral studies, I published a series of well-received ‘Semi-analytic forecasts for JWST’ papers, which delivered a wide variety of predictions regarding objects that are yet to be detected, providing how future observations may constrain the uncertainties in the underlying physical processes. I am an active member of the JWST Early Release Science (CEERS) Team and the Roman Space Telescope Cosmic Dawn Science Investigation Team (SIT).*
